

NVIDIA TESLA V100 GPU ACCELERATOR

The Most Advanced Data Center GPU Ever Built.

NVIDIA® Tesla® V100 is the world's most advanced data center GPU ever built to accelerate AI, HPC, and graphics. Powered by NVIDIA Volta, the latest GPU architecture, Tesla V100 offers the performance of up to 100 CPUs in a single GPU—enabling data scientists, researchers, and engineers to tackle challenges that were once thought impossible.

47X Higher Throughput than CPU Server on Deep Learning Inference

Workload: ResNet-50 | CPU: 1X Xeon E5-2690v4 @ 2.6GHz | GPU: add 1X NVIDIA* Tesla* P100 or V100

Deep Learning Training in One Workday

Server Config: Dual Xeon E5-2699 v4, 2.6GHz | 8X Tesla K80, Tesla P100 or Tesla V100 | ResNet-50 Training on Caffe2 for 90 Epochs with 1.28M ImageNet dataset

1.5X HPC Performance in One Year with NVIDIA Tesla V100

SPECIFICATIONS

Tesla V100 PCIe

Tesla V100 SXM2

	NVIDIA Volta	
GPU Architecture	NVIDIA Volta	
NVIDIA Tensor Cores	640	
NVIDIA CUDA® Cores	5,120	
Double-Precision Performance	7 TFLOPS	7.8 TFLOPS
Single-Precision Performance	14 TFLOPS	15.7 TFLOPS
Tensor Performance	112 TFLOPS	125 TFLOPS
GPU Memory	16 GB or 32 GB HBM2	
Memory Bandwidth	900 GB/sec	
ECC	Yes	
Interconnect Bandwidth	32 GB/sec	300 GB/sec
System Interface	PCIe Gen3	NVIDIA NVLink
Form Factor	PCIe Full Height/Length	SXM2
Max Power Consumption	250 W	300 W
Thermal Solution	Passive	
Compute APIs	CUDA, DirectCompute, OpenCL™, OpenACC	

GROUNDBREAKING INNOVATIONS

VOLTA ARCHITECTURE

By pairing CUDA Cores and Tensor Cores within a unified architecture, a single server with Tesla V100 GPUs can replace hundreds of commodity CPU servers for traditional HPC and Deep Learning.

TENSOR CORE

Equipped with 640 Tensor Cores, Tesla V100 delivers 125 TeraFLOPS of deep learning performance. That's 12X Tensor FLOPS for DL Training, and 6X Tensor FLOPS for DL Inference when compared to NVIDIA Pascal™ GPUs.

NEXT GENERATION NVLINK

NVIDIA NVLink in Tesla V100 delivers 2X higher throughput compared to the previous generation. Up to eight Tesla V100 accelerators can be interconnected at up to 300 GB/s to unleash the highest application performance possible on a single server.

MAXIMUM EFFICIENCY MODE

The new maximum efficiency mode allows data centers to achieve up to 40% higher compute capacity per rack within the existing power budget. In this mode, Tesla V100 runs at peak processing efficiency, providing up to 80% of the performance at half the power consumption.

HBM2

With a combination of improved raw bandwidth of 900 GB/s and higher DRAM utilization efficiency at 95%, Tesla V100 delivers 1.5X higher memory bandwidth over Pascal GPUs as measured on STREAM. Tesla V100 is now available in a 32GB configuration that doubles the memory of the standard 16GB offering.

PROGRAMMABILITY

Tesla V100 is architected from the ground up to simplify programmability. Its new independent thread scheduling enables finer-grain synchronization and improves GPU utilization by sharing resources among small jobs.

Tesla V100 is the flagship product of Tesla data center computing platform for deep learning, HPC, and graphics. The Tesla platform accelerates over 550 HPC applications and every major deep learning framework. It is available everywhere from desktops to servers to cloud services, delivering both dramatic performance gains and cost savings opportunities.

Tesla GPU Server

NUMBERSMASHER 1U GPU WITH 4 TESLA V100 PCI-E GPUS

- > 4 Tesla V100 GPUs
- > 2 Intel Xeon Processors
- > Up to 512GB DDR4 memory

MICROWAY

Incorporated in 1982, Microway designs state-of-the-art, high-end Linux clusters, servers, and workstations for NVIDIA GPUs applied for HPC, HPDA, and Deep Learning. Classified as a small business, woman owned and operated, Microway's GSA Schedule is GS-35F-0431N.
